## 1. General Descriptions

## 1.1 Introduction

The LCM is a color active matrix TFT LCD module using amorphous silicon TFT's (Thin Film Transistors) as an active switching device which has a 10.1 inch diagonally measured active area with WUXGA resolutions (1920 horizontal by 1200 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical Stripe, and this module can display 16.7M colors. The TFT-LCD panel used for this module is a low reflection and higher color type.

### 1.2 Features

- 3.3 V Logic Power
- LVDS (2ch) Interface for 1920RGB x 1200 resolution.
- 16.7M Colors (6bit + HFRC)
- Data Enable Signal Mode
- Green Product (RoHS)
- Projective Capacitive Touch panel (USB Interface).

## 4.6 Power Sequence

Date: 2016/4/28

To prevent a latch-up or DC operation of the LCD module, the power on/off sequence shall be as shown below.

VDD power and LED on/off sequence are as follows. Interface signals are also shown in the chart. Signal shall be Hi-Z state or low level when VDD is off.

Luminance Uniformity	9Points	;	75	-	-	%	Note4
Cross Talk	СТ	Θ=0	-	-	4.0	%	Note6

- Note (1) Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see Figure 1).
- Note (2) Contrast measurements shall be made at viewing angle of  $\Theta$ = 0 and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state (see Figure1). Luminance Contrast Ratio (CR) is defined mathematically as CR = Luminance when displaying a white raster / Luminance when displaying a black raster.
- Note (3) Reference only / Standard Front Surface Treatment Measured with green cover glass. The color chromaticity coordinates specified in Table 4 shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.

Figure 1. Measurement Set Up

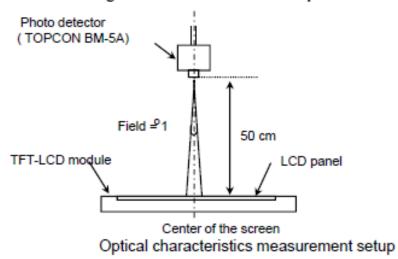

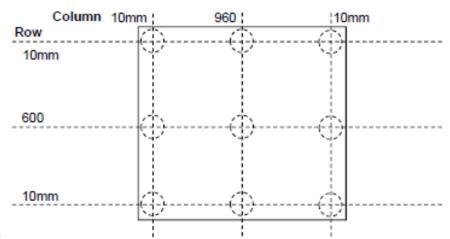

Figure 2. White Luminance and Uniformity Measurement Locations (9 points)

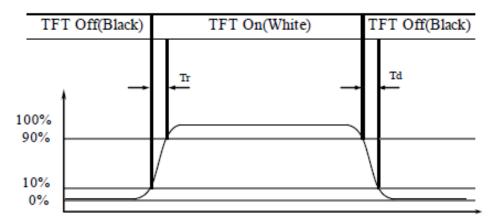

Note 4.

Date: 2016/4/28

Luminance of white is defined as luminance values of 9 points across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in Figure 2 for a total of the measurements per display.

- •Yw = (Sum of 9 Points Luminance / 9)
- ΔY9 = (Min Luminance of 9points /Max luminance of 9 point) \* 100%
- \* LED Condition = (Duty Ratio 100%, LED current 20.0mA)

Figure 3. Response Time Testing

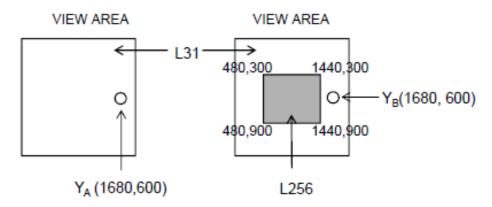

#### Note 5.

The electro-optical response time measurements shall be made as Figure 4 by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is Tr, and 90% to 10% is Td.

#### Note 6.

Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark (Refer to Figure 4).

Figure 4. Cross Modulation Test Description

Cross-Talk (%) = 
$$\left| \frac{Y_B - Y_A}{Y_B} \right| \times 100$$

Where:

Date: 2016/4/28

Y<sub>A</sub> = Initial luminance of measured area (cd/m<sup>2</sup>)

Y<sub>B</sub> = Subsequent luminance of measured area (cd/m<sup>2</sup>)

The location measured will be exactly the same in both patterns

- Note (1) Condensation of water is not permitted on the module.
- Note (2) The module should be inspected after 1 hour storage in normal conditions (15-35°C, 45-65%RH)

Definitions of life end point:

- Current drain should be smaller than the specific value.
- Function of the module should be maintained.
- Appearance and display quality should not have degraded noticeably.
- Contrast ratio should be greater than 50% of the initial value.

## 10. GENERAL PRECAUTION

### 10.1 Use Restriction

(1) This product is not authorized for using in life supporting systems, aircraft navigation control systems, military systems, and any other application where performance failure could be life-threatening or catastrophic.

## 10.2 Disassembling or Modification

(2) Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and causing scratches or dust on the display. Ampire does not warrant the module if customers disassemble or modify the module.

## 10.3 Breakage of LCD Panel

- (1) If LCD panel breaks, and liquid crystal spills out. Do not ingest or inhale liquid crystal, and contact liquid crystal with skin.
- (2) If liquid crystal contacts mouth or eyes, rinse out with water immediately.
- (3) If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.
- (4) Handle carefully with chips of glass that may cause injury when the glass is broken.

### 10.4 Electric Shock

Date: 2016/4/28

- (1) Disconnect power supply before handling LCD module.
- (2) Do not pull or fold the LED cable.
- (3) Do not touch the parts inside LCD modules and the fluorescent LED's connector or cables which prevent it from electric shock.

## 10.5 Absolute Maximum Ratings and Power Protection Circuit

- (1) Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts' parameters, environmental temperature, etc. Otherwise, LCD module may be damaged.
- (2) Please do not leave LCD module in the environment of high humidity and high temperature for a long time.
- (3) We recommend employing protection circuit for power supply.

## 10.6 Operation

- (1) Do not touch, push or rub the polarizer with anything which is harder than HB pencil lead.
- (2) Use fingerstalls of soft gloves to keep clean display quality when someone handles the LCD module for incoming inspection or assembly.
- (3) When the surface is dusty, please wipe gently with absorbent cotton or other soft material.
- (4) Wipe off saliva or water drops as soon as possible. If saliva or water drops and contacts with polarizer for a long time, they may cause deformation or color fading.
- (5) When cleaning the adhesives, please use absorbent cotton wetted with a little petroleum benzine or other adequate solvent.

### 10.7 Mechanism

(1) Please mount LCD module by using mounting holes which arranged in four corners tightly.

## **10.8 Static Electricity**

- (1) Protection film must remove very slowly from the surface of LCD module to prevent from electrostatic occurrence.
- (2) Because LCD module uses CMOS-IC on circuit board and TFT-LCD panel, it is very weak to electrostatic discharge. Please be careful with electrostatic discharge. Person who handles the module should be grounded through adequate methods.

## 10.9 Strong Light Exposure

(1) The module shall not be exposed under strong light such as direct sunlight. Otherwise, display characteristics may be changed.

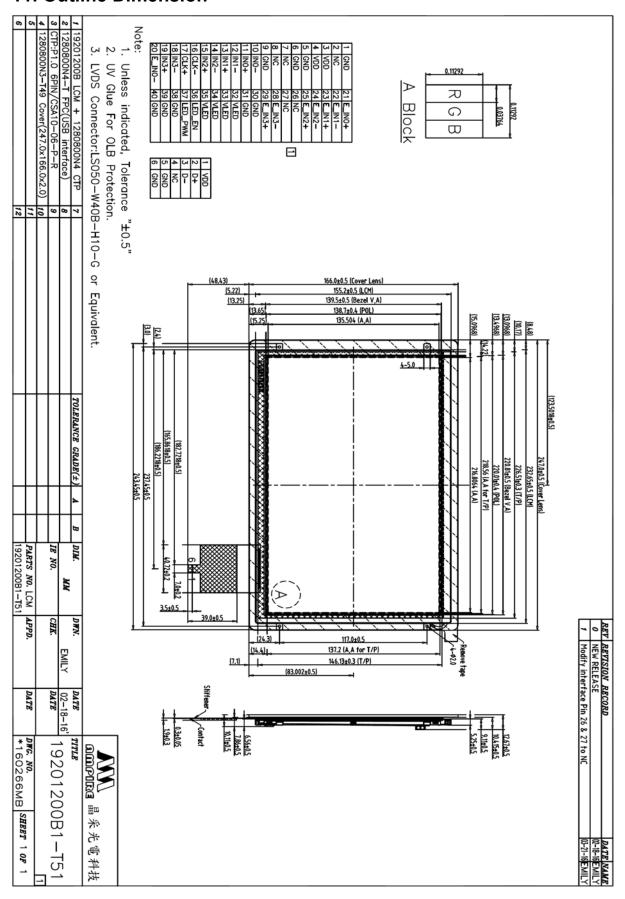

## 10.10 Disposal

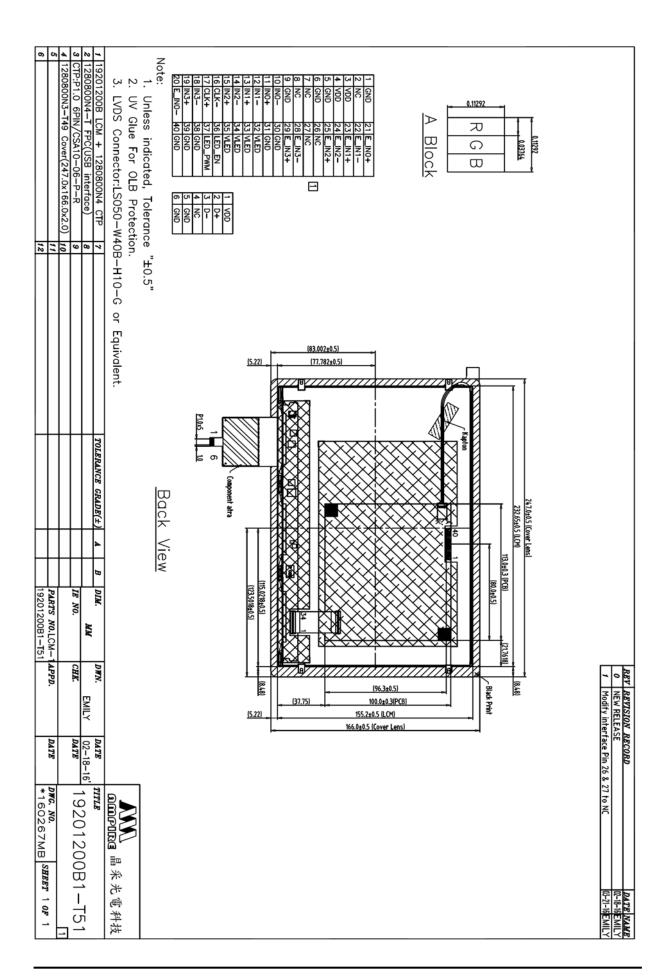

(1) When you are disposing LCD module, obey the local environmental regulations.

### **10.11 Others**

- (1) AMIPRE will provide one year warrantee for all products and three months warrantee for all repairing products.
- (2) Do not keep the LCD at the same display pattern continually. The residual image will happen and it will damage the LCD. Please use screen saver.
